Application/Control Number: 09/439,162

Art Unit: 2132

#### **DETAILED ACTION**

### Drawings

1. New corrected drawings are required in this application because lines, letters, and numbers are not uniformly thick and well defined, clean, durable, and black. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-6, 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Alperovich, U.S. Patent No. 5,781,628. Referring to claims 1, 2, 4-6, 10-13, Alperovich discloses a system and method for selective restriction of ciphering wherein a mobile switching center, base station controller, and a transceiving base station, and a ciphering database work together in a GSM communications system to provide geographically dependent encrypted communications (Col. 1, lines 29-59 & Col. 3, lines 8-15). The reported or calculated position of a user or base station, using longitude and latitude (region code), is checked against the cipher database to verify the type of encrypted communications that are allowable in that jurisdiction. The encryption procedure (encryption algorithm) for the area is then transferred to the base stations

Application/Control Number: 09/439,162

Art Unit: 2132

and users so that the proper communication can be established for the current jurisdiction (Col. 3, line 64 – Col. 5, line 65).

Referring to claim 3, Alperovich discloses that the network information is maintained in a home location register in a mobile switching center (first element)(Col. 1, lines 45-67), and the cipher database is stored in the base station controller (second element)(Col. 4, lines 16-21).

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 7-9 and 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alperovich, U.S. Patent No. 5,781,628, in view of Sampei, U.S. Patent No. 5,732,349. Referring to claims 7-9 and 14-17, Alperovich discloses a system and method for selective restriction of ciphering wherein a mobile switching center, base station controller, and a transceiving base station, and a ciphering database work together in a GSM communications system to provide geographically dependent encrypted communications (Col. 1, lines 29-59 & Col. 3, lines 8-15). The reported or calculated position of a user or base station, using longitude and latitude (region code), is checked against the cipher database to verify the type of encrypted communications that are allowable in that jurisdiction. The encryption procedure (encryption algorithm) for the area is then transferred to the base stations and users so that the proper communication can be established for the current jurisdiction (Col. 3, line 64 Col. 5, line 65). Alperovich does not disclose that the reported or calculated position of the user or base station is a mobile country

Art Unit: 2132

code. Sampei discloses a system and method for controlling a portable telephone according to discriminated area code wherein a mobile country code is used to identify the calling area (Col. 1, lines 56-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made for the reported or calculated position of the user or base station of Alperovich to be a mobile country code because mobile country codes are widely used in GSM systems as disclosed in Sampei Col. 1, lines 56-65).

### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dent, U.S. Patent No. 5,812,955

Gardeck, U.S. Patent No. 5,471,532

Lopinto, U.S. Patent No. 4,549,308

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin E Lanier whose telephone number is 703-305-7684. The examiner can normally be reached on M-Th0 7:30am-5:00pm, F 7:30am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on (703)305-1830. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
